BSHC Software Development/Cybersecurity - Mid Point Examination Rubric (100% equates to 25% of the overall project)						
	H1 (80 – 100)	**H1 (70 - 79)**	**H2.1 (60 - 69)**	**H2.2 (50 - 59)**	**Pass (40 - 49)**	**Fail (0 - 39)**
Project Proposal (15%)	Thoroughly researched proposal with potential beyond the expectations of the programme.	Excellent proposal well researched and could have commercial/real-world potential. Clear aims and objectives outlined in detail.	Strong proposal based on valid research and investigation. Clear aims and objectives outlined in some detail.	Good Proposal well thought out and defined. Basic Aims and objectives outlined.	Proposal has reached bare minimum standards. Unclear aims and objectives outlined.	Weak proposal with no details. No aims and objectives outlined.
Communication Skills (10%)	The presentation exceeded expectations. The speaker was poised and enthusiastic. Questions were excellently answered.	The presentation clearly outlined the project argument. Slides were error-free and logically presented. The speaker was poised and enthusiastic. Questions were excellently answered.	The presentation clearly outlined the project argument. Slides were error-free and logically presented. The speaker was poised and enthusiastic. Questions were very well answered.	The presentation clearly outlined the project argument. The speaker was enthusiastic. Questions were well answered.	The presentation outlined the project argument. Questions were reasonably well answered.	The presentation is unorganised and unclear. Questions were unanswered/poorly answered.
Project Analysis & Planning (10%)	The challenging aspects of the project process and solutions have been identified, as evidenced by conceptual diagrams and alternative solutions have also been considered. The project plan maps all project processes to appropriate tasks, milestones, and activities beyond programme expectations.	The challenging aspects of the project process are understood, and solutions have been identified as evidenced by conceptual diagrams. The project plan maps all project processes to appropriate tasks, milestones, and activities.	The challenging aspects of the project process are understood, and some solutions have been identified as evidenced by conceptual diagrams. The project plan maps most project processes to appropriate tasks, milestones, and activities.	The challenging aspects of the project process are understood, however few solutions have been identified. The project plan maps most project processes to tasks, milestones, and activities with some detail.	The challenging aspects of the project process are understood, however no solutions have been identified. The project plan maps some project processes to tasks, milestones, and activities but lacks some detail.	No attempt has been made to address the difficult aspects of the project process provided. There is little or no breakdown of tasks, milestones, and activities.
Requirements Engineering (40%)	A systematic and iterative approach to requirements gathering	A systematic and iterative approach to requirements	A systematic approach to requirements gathering as	A systematic approach to requirements gathering as evidenced	An ad hoc approach to requirements gathering as evidenced by	Inadequate requirements

	as evidenced by outstanding requirements documentation detailing all functional and non-functional requirements expected of the system, and how the user will interact with the system beyond the programme expectations.	gathering as evidenced by requirements documentation detailing all functional and non-functional requirements expected of the system, and how the user will interact with the system.	evidenced by requirements documentation detailing all functional and non-functional requirements expected of the system, and how the user will interact with the system.	by requirements documentation detailing most of the functional and non-functional requirements expected of the system, and how the user will interact with the system.	requirements documentation detailing number of functional and/or non-functional requirements expected of the system, and how the user will interact with the system.	gathering and documentation.
Prototype (25%)	There is a working demonstration of an application that provides a complete visual understanding of all functionality and how a user will interact with it. One or more core elements of functionality have already been implemented.	There is a working demonstration of an application that provides a visual understanding of all functionality of the application and how a user will interact with it. A number of basic elements of functionality have already been implemented.	There is a working demonstration of an application that provides a visual understanding of the core functionality of the application and how a user will interact. Some element of basic functionality has already been implemented.	There is a working demonstration of an application that provides a visual understanding of some functionality of the application and how a user will interact.	There is a working demonstration of an application that provides a partial visual understanding of some functionality of the application and how a user will interact.	There is a working demonstration of an application that does not provide a visual understanding of the information system functionality or how a user might interact with it.
